wherein (+)(S) enantiomer is present in amount of at least 75%; and all pharmaceutically acceptable salt forms, prodrugs and metabolites thereof which are therapeutically active for treating or preventing pain and inflammation; and

C. printed instructional and informational material associated with said container, which is attached to said container, enclosed in said container, or displayed as an integral part of said container, said instructional and informational material stating in words that said compound of Formula (I) comprising a therapeutic agent contained in said package, when administered to said member of the species *Canis familiaris* to be treated, effectively inhibits cyclo-oxygenase-2 (COX-2) induced at an existing or expected site of pain and inflammation in said dog, thereby treating or preventing said pain and inflammation which would otherwise result therefrom, while at the same time reducing or eliminating undesirable side effects associated with simultaneous inhibition of the activity of constitutive cyclo-oxygenase-1 (COX-1) by selectively inhibiting COX-2 activity with reference to COX-1 activity, wherein the selectivity ratio of COX-2 : COX-1 activity inhibition is at least 3 : 1 based on ex vivo inhibition levels in whole blood measured at a dose giving ≥ 80% COX-2 inhibition.
